AMENDMENT TO THE CLAIMS

1. - 17. (Cancelled)

18. (New) An isolated protein comprising an amino acid sequence

as set forth in SEQ ID NO:5 or conservative substitutions thereof,

wherein said protein is capable of inducing an allergic reaction

to latex in a person sensitized to said protein.

19. (New) The protein of claim 18, comprising an amino acid

sequence as set forth in SEQ ID NO:5.

20. (New) The protein of claim 18, having an amino acid sequence

as set forth in SEQ ID NO:5.

(New) A peptide comprising a biologically active portion of

the protein of claim 18, wherein said peptide is capable of

inducing an allergic reaction in a person sensitized to said

protein.

(New) An isolated nucleic acid molecule encoding the protein

of claim 18.

(New) An isolated nucleic acid molecule encoding the peptide

of claim 21.

(New) The nucleic acid molecule of claim 22, comprising the

nucleotide sequence of SEQ ID NO:1.

TC Art Unit:

isolated nucleic acid 25. molecule (New) An comprising

nucleotide sequence encoding a protein comprising an amino acid

sequence as set forth in SEQ ID NO:2.

26. (New) A vector comprising the nucleic acid molecule of any of

claims 22-25.

27. (New) The vector of claim 26, wherein said vector is an

expression vector.

(New) A host cell transfected with the vector of claim 27. 28.

29. (New) The host cell of claim 28, wherein the organism of said

host cell is Escherichia coli.

(New) A method of expressing a protein comprising the step of

culturing the isolated host cell of claim 28 under conditions in

which said nucleic acid molecule is expressed, thereby expressing

said protein.

(New) A method for identifying a compound capable of binding

to the protein of claim 18, said method comprising the steps of:

contacting said protein, or a cell expressing said

protein, with a test compound under conditions suitable for

binding; and

(b) detecting binding of the test compound to said protein.

-5-

TC Art Unit:

32. (New) A method for identifying a compound capable of binding to the nucleic acid molecule of claim 22, said method comprising

the steps of:

contacting said nucleic acid molecule with a test

compound under conditions suitable for binding; and

(b) detecting binding of the test compound to said nucleic

acid molecule.

(New) An isolated protein capable of inducing an allergic 33.

reaction in a person sensitized to said protein, wherein said

protein, further, has a molecular weight of about 42,000 Dalton,

has an isoelectric point of about 4.7, binds with IqE of patients

sensitized to the protein and comprises an amino acid sequence as

set forth in SEQ ID NO:5 or conservative substitutions thereof.

(New) A method of producing the protein of claim 18, said

method comprising the steps of:

centrifuging latex to obtain the bottom fraction;

b) freeze-thawing the bottom fraction to obtain latex B-

serum; and

isolating and purifying said protein from the B-serum

obtained in step (b).

35. (New) The method of claim 34, wherein the isolation and

purification of said protein are carried out via a series of

chromatographic separations.

-6-

Application No. UnAssigned

Filed: Herewith

TC Art Unit:

(New) The method of claim 35, wherein said chromatographic

separations comprise ion exchange chromatography

filtration.

37. (New) An antibody that selectively binds to the protein of

claim 18.

38. (New) The antibody of claim 37, wherein said antibody is a

monoclonal antibody.

39. (New) The antibody of claim 37, wherein said antibody is a

polyclonal antibody.

(New) A method for producing a protein in recombinant form,

said method comprising the steps of:

inserting the nucleic acid molecule of claim 22 into an

appropriate vector; and

inducing the vector to express said recombinant protein.

41. (New) The method of claim 40, wherein the vector is a

microorganism, a plant or an animal.

42. (New) The method of claim 41, wherein the microorganism is a

bacterium, a virus or a yeast.

43. (New) The method of claim 42, wherein the bacterium is

Escherichia coli.

TC Art Unit:

(New) The method of claim 40, wherein, in step (b), said 44. vector is exposed to an inducer.

45. (New) The method of claim 44, wherein said inducer is isopropyl thiogalactoside (IPTG).

46. immunoassay for the presence of antibodies to allergenic latex protein in a sample, said immunoassay comprising the steps of:

- providing the protein of claim 18;
- reacting a sample of antibodies with said protein; and (b)
- (c) detecting a reaction between said protein and said sample.

47. (New) A method of providing immunotherapy for a patient who susceptible to an allergic reaction to latex comprising administering to the patient an immunotherapeutically effective amount of the antibody of claim 37.
